timekeeper's guide
EUCi)

This guide is a continuation to the UCI road and track practical guide. It is dedicated to national federations' instructors or to any commissaires who wish to improve their skills as timekeeper.

This guide puts into practice the regulation, it does not replace it! Because the regulation will certainly evolve it may become necessary to adapt this guide accordingly.

The main authors are federal timekeepers Gérard TISSERAND and Stellio COCIANCICH.
International commissaire, Jacques SABATHIER has assured the role of coordinator of this document.

Jacques SABATHIER

## 1. General part

### 1.1 The timekeeper

## Classes of timekeeper

There are two classes of timekeeper:

- regional timekeepers: these officiate in events forming part of the regional calendar,
- federal timekeepers: these officiate in accordance with federal designations in national and UCI calendars.

## Regional timekeeper

Any regional timekeeper candidate must, as a minimum:

- be a regional commissaire,
- be the holder of an official's licence issued in the current year,
- be in possession of a reliable quartz stopwatch with display in 100ths of a second, allowing the display of intermediate times and capable of storing at least thirty times, if possible with a printer,
- take a standard written examination organized by the regional committee, which is to include theory and practical tests, after having previously completed a training course at different events alongside a qualified timekeeper,
- undergo a medical, regardless of age.

## Federal timekeeper

Any federal timekeeper candidate must, as a minimum:

- be a national commissaire,
- be under 50 years of age in the current year ${ }^{(1)}$,
- be the holder of an official's licence issued in the current year,
- have been a regional timekeeper for at least 3 years ${ }^{(1)}$,
- have participated in a test of knowledge for evaluating the most competent candidates ${ }^{(1)}$, with a view to a federal training course followed by a theory and practical examination to obtain the qualification of federal timekeeper. The examination is supervised by the national committee of the Corps of Referees,
- in order to be designated for events forming part of the federal and UCI calendar, federal timekeepers must be in possession of at least one electronic stopwatch with printer, of an approved type (TAG-HEUER, TISSOT or OMEGA type, or similar),
- provide proof of ownership of this stopwatch.

An unsuccessful candidate may retake the examination after a minimum period of 2 years. ${ }^{(1)}$
${ }^{(1)}$ as decided by the national federation
NB: The above stipulations for the qualification of timekeepers are given only by way of example and may be modified by the national federation.

### 1.2 Timekeeping techniques and special features concerning the measurement of time

Time calculation uses complex numbers.
"Complex numbers" are numbers in which the units of different orders do not follow decimal numbering with a change of unit to $10,100,1000$, etc.
Time units are hours, minutes, seconds, tenths/one hundredths/one thousandths of a second.

## These time units are represented as follows:

- Hour : h
- Minute
- Second
- Tenth : $1 / 10$
- One hundredth : $1 / 100$
- One thousandth : $1 / 1000$
- 1 hour $=60$ minutes ( $60^{\prime}$ ) ou 3600 seconds ( $3600^{\prime \prime}$ )
- 1 minute $=60$ seconds ( $60^{\prime \prime}$ )
- 1 second $=10 / 10^{\text {ths }}$ ou $100 / 100^{\text {ths }}$ or $1000 / 1000^{\text {ths }}$

When qualified, timekeepers will be provided with calculators allowing them to convert, add, subtract, divide or multiply and also to carry out all operations with complex numbers. Barely twenty years ago, such calculations were made manually or using mental arithmetic, with all these figures being rounded to the nearest second, in accordance with scales and conversion tables, which all took a great deal of time but meant that our predecessors were veritable mental-arithmetic champions!
Nowadays, we are able to use calculators, and timekeepers have most certainly lost some of their predecessors' performance edge.
However, in simple addition or subtraction calculations, it is much faster for a timekeeper to use mental arithmetic rather than a calculator.

### 1.3 Timekeeping supporting documents

In order to standardize working documents and methods for all timekeepers, it is desirable for each time-keeper to be in possession of standard forms (attached hereto).

## In the case of one-day and stage road events:

- sheet for recording times numbered 1 to 30, allowing the recording of the time of each group, its composition, differences as compared with the winner's time, the average, deadlines and elimination times, the list of non-starters and retirements
- sheet for recording times numbered from 31 to 60 (as above)
- road finish sheet
- sheet for recording daily team classification
- forms for recording overall team classification
- individual form for the overall classification ( 5 stages)
- individual form for the overall classification (12 stages)
- individual form for the time trial
- individual form for the time trial and prologue
- time trial starting order
- team time trial finish form
- sheet for recording time trial finish times
- record of distances and averages
- race follow-up

## In the case of cyclo-cross:

- "lap-by-lap" scoring sheet, with the distances between the first ten (in major national events)
- table specifying the number of laps to be raced as a function of the category of competitor and maximum race time

## In the case of track events:

- sheet recording times ( $200 \mathrm{~m}, 500 \mathrm{~m}, \mathrm{~km}$ )
- sheet recording pursuit times (recording at each half-lap)

### 1.4 Functions and recording time

## A federal timekeeper must record the time in the following cases:

- national track record attempts (two timekeepers)
- official road and time trial events (two timekeepers)
- major road classics (one timekeeper)
- stage events (one or two timekeepers if there is a time trial in the event).

In the case of track events, times are recorded to $1000^{\text {th }}$ of a second whenever time determines the result.
In the case of a road event, times are recorded to $1 / 10^{\text {th }}$ or even $1 / 100^{\text {th }}$ of a second (for monitoring break-aways), and are then rounded to the nearest second for road races and to $100^{\text {th }}$ of a second in the case of time trial races.

The recording of times using automatic time sensors and recording apparatus is not permitted unless an official timekeeper has operated the device.
In all circumstances, he must make a manual check of electronic timing.
In all other cases, the recording of time by an official timekeeper is recommended.
If the organizer of an event is bound by an advertising contract to a specific brand of stopwatch, he cannot require the official timekeeper to use stopwatches of that brand unless these devices offer the same guarantees and meet the requirements for federal timekeepers.

In a stage event, the presence of a federal timekeeper is mandatory, and it is desirable for him to be assisted by a federal or regional timekeeper.
Two federal timekeepers must officiate at stage events that include a time trial.
An official timekeeper may never simultaneously perform his own tasks and those of a race official.

## Official times:

If several stopwatches have been used by the one or more timekeepers, as appropriate, the following rules should be complied with:

- if two stopwatches have recorded the time and concur, said time is the official time. If they do not concur, only the worst time recorded is the official time;
- if three stopwatches record one or more different times, only the intermediate time, not the average time, is regarded as the official time.

### 1.5 Official time

Prior to the start of any event, timekeepers must synchronize the various stopwatches with the speaking clock (telephone call to the number for each country) and advise the various officials and the announcer of the official time.

The timekeeper and the finish judge alone are responsible for the various time classifications. They must check the latter before publication.

### 1.6 The timekeeper's equipment

There are various forms of stopwatch and associated peripherals:

## Stopwatches

- The "lanyard" stopwatch: manual stopwatch with digital display allowing viewing of the time of day (time trial start), the race time and the intermediate times with minimum memory capacity of 30 times.
- Electronic stopwatch with integral printer of TAG-HEUER 501, 505, 520, POWERTIME OMEGA or similar type: these stopwatches allow the use of suitable peripherals, such as squeeze-horn, contact strips, photoelectric cells, starting gate or starting pistol. Such stopwatches can incorporate competitors' start times and allow instantaneous calculation of the race time and also the classification. They may also be directly connected to computers.
- Electronic desk-top stopwatch that can be linked up to a video-finish system, starting blocks, display panel and TV overlay (equipment used principally in velodromes or made available by service providers at major road events).

## Calculator

Of a type suitable for calculating complex numbers (averages, deadlines, addition, subtraction, multiplication).
Several brands offer calculators suitable for calculating time.
For the following examples, we have used the CASIO FX 92 COLLEGE II (the most commonly used).

## Calculating an average

Example: 154,00 km over 4 h 1' $25^{\prime \prime}$

## Time addition

Example: 3 h $17^{\prime} 15^{\prime \prime}+2$ h 59' $54^{\prime \prime}$
Proceed as follows:

## Time subtraction

Example: 7 h $18^{\prime} 42^{\prime \prime}-7$ h $15^{\prime} 36^{\prime \prime}$
Proceed as follows:

## Calculating an average using $100^{\text {ths }}$ of a second

The operation is identical to Example 1, but with the introduction of the $\square$ of the decimal for figures after the whole seconds before the one hundredths:

## Calculation using the memory (time or distance)

After checking that the memory is empty, enter the fixed element (distance or time) using thee $\mathrm{M}_{+}$key, make the 1st calculation and then engage the memory by using thee $M R$ key.

## Example: Calculation of various averages in a time trial event:

Distance: 32 km , 1st rider's time: 38' 3 " $8 / 10$
 the average is displayed, i.e. 50.442245 , rounded to $50.442 \mathrm{~km} / \mathrm{h}$.
In order to calculate another average, press the MR key, the distance of 32 appears again and proceed as above.

## Multiplication

Example of the calculation of an elimination deadline: 1st rider's time: 4 h 29' 37 ", elimination deadline: $18 \%$ Proceed as follows:
After having displayed the race time, multiply that by 0.18 , i.e:
 to the next second, the time to be taken is $48^{\prime} 32^{\prime \prime}$, the maximum race time before elimination will thus be $4 \mathrm{~h} 29^{\prime} 37^{\prime \prime}+$ 48' $32^{\prime \prime}$, i.e: 5 h 18' 9"
 the result appears: $5^{\circ} 18^{\circ} 8.86$. This will be rounded up to the next second, i.e. $5 \mathrm{~h} \mathbf{1 8}^{\prime} \mathbf{9}^{\prime \prime}$.

## Division

Proceed as above:
Example: 6 h $12^{\prime} 36^{\prime \prime}$ divide by 6

## Presentation of operations

## Time addition

Carry operations: 11111

| $3 h$ | $49^{\prime}$ | $23^{\prime \prime}$ | $5 / 10$ |
| ---: | :--- | :--- | :--- |
| + | $2 h$ | $53^{\prime}$ | $59^{\prime \prime}$ |
| $8 / 10$ |  |  |  |
| $6 h$ | $43^{\prime}$ | $23^{\prime \prime}$ | $3 / 10$ |

| 3 h | $49^{\prime}$ | $23^{\prime \prime}$ | $5 / 10$ |
| ---: | ---: | ---: | ---: |
| +2 h | $53^{\prime}$ | $59^{\prime \prime}$ | $8 / 10$ |
| 5 h | $102^{\prime}$ | $82^{\prime \prime}$ | $13 / 10$ |
|  |  | $+1^{\prime \prime}$ | $-10 / 10$ |
| 5 h | $102^{\prime}$ | $83^{\prime \prime}$ | $\mathbf{3 / 1 0}$ |
|  | $+\quad 1^{\prime}$ | $-60^{\prime \prime}$ |  |
| 5 h | $103^{\prime}$ | $\mathbf{2 3 \prime}$ | $\mathbf{3 / 1 0}$ |
| +1 h | $-60^{\prime}$ |  |  |
| $\mathbf{6 h}$ | $\mathbf{4 3}$ | $\mathbf{2 3 \prime}$ | $\mathbf{3 / 1 0}$ |

NB: The presentation of the left-hand operation (calculation and comments) must enable an uninitiated person to carry over supplementary units with the following explanations:
Line 3 records the time addition unit by unit.
$13 / 10$ of a second equivalent to $1^{\prime \prime}$ and $3 / 10$.
To the 82 seconds, the extra second from the 10ths is thus added, i.e. 83 seconds or $\mathbf{1}^{\prime}$ and $\mathbf{2 3 \prime \prime}$.
To the 102 minutes, the extra minute from the seconds is thus added, i.e. $103^{\prime}$ or 1 h and $\mathbf{4 3}^{\prime}$.
To the 5 hours, the extra hour from the minutes is thus added, i.e. $\mathbf{6} \mathbf{h}$.
The definitive result is therefore $6 \mathrm{~h} 43^{\prime} \mathbf{2 3 \prime \prime} \mathbf{3 / 1 0}$.
In practice, the timekeeper will perform these carry operations during a calculation, presented on the right-hand side.

## Operation using the calculator

3 ○"" $\qquad$ $23 \square$ 5 -"" $+2{ }^{\circ}$ 01 53 $\qquad$ 59 $\qquad$ -"" $\square$ SHIFT -""
the following result appears: $6^{\circ} 43^{\circ} 23.3$, i.e. $6 \mathrm{~h} 43^{\prime} 23^{\prime \prime} 3 / 10$.

## Time subtraction

$N B$ : The presentation of the left-hand operation enables an uninitiated person to understand how the conversion has been made from A (6 h 47' 31" 7/10) to a (5 h 106' 90" 17/10).

In practice, a timekeeper will make these calculations during a direct operation by incorporating these mental conversions, when calculating tenths, seconds, minutes and hours.

## Operation using the calculator

the following result appears: $2^{\circ} 48^{\circ} 45.8$, i.e. 2 h $48^{\prime} 45^{\prime \prime} 8 / 10$.

## Time multiplication

Example: $\quad 3 \mathrm{~h}$ 28' $35^{\prime \prime} 42 / 100$

| $x$ | 3 |
| :--- | :--- |
| $9 h ~ 84^{\prime} 105^{\prime \prime} 126 / 100$ |  |

i.e.: $\quad 10 \mathrm{~h} \mathbf{2 5}^{\prime} \mathbf{4 6 \prime \prime} \quad \mathbf{2 6 / 1 0 0}$

## Operation using the calculator

ATTENTION: The digital display window has only 8 spaces, so the one hundredths 26 do not appear on the screen, but the machine makes the correct calculation in terms of seconds. In this case, the solution consists in not entering the one hundredths, in multiplying them by three and in adding them to the result obtained previously.

## Time division

| 6 h | $37^{\prime}$ | $45^{\prime \prime}$ | 4 |
| :--- | :---: | :---: | ---: |
| $2 \times 60^{\prime}=120$ |  | $\mathbf{1 ~ h}$ |  |
|  | 157 |  | $\mathbf{3 9 ^ { \prime }}$ |
|  | $1=$ | $60^{\prime \prime}$ |  |
|  |  | $105^{\prime \prime}$ | $\mathbf{2 6 \prime \prime}$ |
|  |  | $1^{\prime \prime}=100 / 100$ | $\mathbf{2 5 / 1 0 0}$ |

The emboldened result appears vertically, i.e.: 1 h 39' 26" 25/100 ${ }^{\text {es }}$.

## Operation using the calculator

As in the case of multiplication, the screen is limited to 8 characters, so the last figure does not appear.

### 1.7 Timekeeper's activity in the various events

You have been designated for a regional, federal or international event as timekeeper for a one-day or stage race:

## Before the event

Please contact the organizer regarding your arrival (date, time and take-over place), asking him to send you the specific regulations for the event and also the number of teams and riders participating.
Study all the special points of the event regulations and, in particular, everything concerning timekeeping.
Check whether there are any bonuses envisaged and whether these are in accordance with federal or UCI regulations. Check the elimination deadlines. Check for any level crossings.
In the case of a team time trial, check that the time-recording definition is provided (on which rider?) and whether there is any time ceiling.
This information will enable you to prepare your timekeeping documents: finish sheets, any time trial forms, individual time classification forms, team day and overall classification forms. You will also be able to make comments and provide the chief commissaire with any further information prior to the time manager's meeting.

### 1.8 Position of the timekeeper in road events

In all circumstances, the timekeeper travels at the front, ahead of the front of the race:

- in order to trigger the time at km 0 ,
- in order to calculate various time averages for the race and to pass these on,
- to cover any blocked path scenarios,
- in order to be able easily to reach the finish by leaving the race within the last thirty kilometres, without having to overtake the riders.

## 2. Road

### 2.1 One-day events (one timekeeper)

- Synchronization of the stopwatch(es) with official time (speaking clock, phone number according to the country).
- Triggering the stopwatch (race time) at the actual start of the event - for both standing and flying start (km 0, set the car's daily trip meter to 0).
- Calculate the various kilometre averages every hour during the race and pass this information on.
- Possible blocked path scenarios in the event of a race incident (level crossing or other event).
- Recording of the time of each group at the finish (carefully note at least the first and last in each group). At the finish, all riders in a peloton are awarded the same time unless this peloton has gaps equal to or greater than one second; if this is the case, the timekeeper records a new time. He officiates until the sweep vehicle has arrived and reports the times of any riders exceeding the deadline to the principal commissaires.
- All finish times are rounded down to the next second except in the case of elimination times, which are always rounded up to the next second.
- Elimination deadlines are set by the organizer in the special regulations for the event or, failing that, in the federal or UCI regulations.
- Calculating the hour average, rounded down to the last metre, over real time without bonuses or penalties.
- Calculation of elimination deadlines and of the maximum race time to be established in accordance with the UCI regulations. A rider arriving within a deadline exceeding the time percentage (referred to in the regulations) of the winner is not retained in the classification. The elimination deadline may be increased in the event of exceptional circumstances by the college of commissaires, in consultation with the organizer.
- UCI regulations specify that all riders in the same peloton are awarded the same time. Time-keepers officiate until the sweep vehicle has arrived. They also record the times of riders arriving after the deadlines granted and they and the list, together with the times, to the president of the commissaires' panel.
- Checking classifications and times with the finish judge prior to publication.
- Team classification is optional. It may be established in two ways:
- by adding together the 3 best individual times of each team. In the event of a dead heat, teams are distinguished by adding places obtained by their first three riders. In the event of a dead heat occurring again, teams are distinguished in terms of the position of their highest placed rider;
- by the addition of places (in the form of points) obtained by the first three riders classified in each team, the first team being that acquiring the smallest number of points, the second the number of points immediately above that, etc. In the event of a dead heat, it is the team whose first rider is most highly placed that will take precedence.

### 2.2 Stage events (two timekeepers)

## Points 1 to 4: as above.

- Timekeeper A records the time of each of the groups at the finish in accordance with the compositions forwarded to him by the finish judge or timekeeper B. All the riders in a peloton or group are awarded the same time unless this peloton or group has gaps equal to or greater than one second. Timekeeper A will record all times until the sweep vehicle arrives. Timekeeper B is responsible for monitoring the presence of the various time leaders and, in the event of a change, for making the calculations for the award of the team overall classification and time classification jerseys in order to pass these on immediately to the organization for the purposes of the awards ceremony.
- Timekeeper B then calculates the stage average, the times and elimination deadlines for forwarding to the president of the jury.
- In the event of doubt, he checks, with the photo-finish operator, the distances involved in the breaks noted (distance between rear-wheel tangent of the last rider crossing the line and the front-wheel tangent of the rider then arriving at the line).
- The individual overall time classification and the team overall time classification are mandatory in the case of certain events forming part of the UCI calendar (cf. UCI road regulations).
- The times recorded by the timekeepers are transferred to the time overall classification. Bonuses are taken into account for the purposes of the individual overall classification only.
- In the event of a time dead heat in the individual overall classification, the one hundredths of a second recorded during individual time trial stages (including the prologue) are reincorporated into the total time in order to distinguish between dead-heat riders.
- In the event of there still being a dead heat or in the absence of individual time trial stages, the places obtained in each stage are added, and, in the last resort, the place obtained in the last stage contested is added.
- The team classification for the day is established by adding the three best individual times for each team. In the event of a dead heat, the teams are distinguished by means of the addition of the places obtained by their first three riders in the stage. In the event of there still being a dead heat, the teams are distinguished by means of the place of their best rider in the stage classification.
- The team overall classification is established by means of the addition of the three best individual times for each team in all stages contested. In the event of a dead heat, the following criteria apply until the dead heat can be resolved:
- Number of first places in the team classification for the day.
- Number of second places in the team classification for the day, etc.;
- If there is still a dead heat, the teams are distinguished by means of the place of their best rider in the individual overall classification.
- Any team reduced to less than three riders is eliminated from the team overall classification.
- 6 - checking of the various time classifications before publication.

## Finish deadline

## UCI regulations

Finish deadlines are set by the special regulations for each event as a function of the stage characteristics.
The college of commissaires may, in agreement with the organizer, extend the deadlines in accordance with particular circumstances.

## Bonuses

As a function of UCI regulations, time bonuses may be awarded under the following conditions: Bonuses may be awarded under the following conditions:

1. Major tours (Tour de France, Giro, Vuelta):

Intermediate sprints:

- half-stages: maximum 2 sprints
- stages:

$$
\text { maximum } 3 \text { sprints }
$$

Bonuses:

- intermediate sprints: $\quad 6^{\prime \prime} 4^{\prime \prime} 2^{\prime \prime}$
- half-stage finish: $\quad 12^{\prime \prime} 8^{\prime \prime} 4^{\prime \prime}$
- stage finish:

20" $12^{\prime \prime} 8^{\prime \prime}$
2. Other events:

Intermediate sprints:

| - half-stages: | maximum 1 sprint <br> - stages: <br> maximum 3 sprints |
| :--- | :--- |
| Bonuses: |  |
| - intermediate sprints: | $3^{\prime \prime} 2^{\prime \prime} 1^{\prime \prime}$ |
| - half-stage finish: | $6^{\prime \prime} 4^{\prime \prime} 2^{\prime \prime}$ |
| - stage finish: | $10^{\prime \prime} 6^{\prime \prime} 4^{\prime \prime}$ |

Bonuses may not be awarded during stages or half-stages without provision thereof at the finish. Bonuses awarded in the course of stages may not be greater than those awarded at the finish.
Bonuses will only be transferred to the individual time overall classification.
No bonus will be awarded for time trial stages or for the prologue.

## Calculating the various averages

In stage events, timekeepers are required to calculate:

- THE OVERALL AVERAGE FOR THE EVENT (rounded down to the nearest metre): addition of the distances of each stage, divided by the addition of the times for the first rider in each stage, without bonuses.
- THE AVERAGE OF THE FIRST RIDER IN THE GENERAL CLASSIFICATION (rounded down to the nearest metre): addition of the distances of each stage, divided by the time of the first rider in the overall classification, without bonuses.
- For the purposes of calculating the various averages, account is never taken of bonuses or penalties.

### 2.3 Individual time trial events

- Synchronization of all stopwatches, starting clocks with the speaking clock (telephone number for each country).
- Timekeeper A (start): he will advise the announcer of the official time 15 minutes prior to the first start in order to advise the first starters and the public, with reminders at $5,4,3,2$ and 1 minute/s preceding the first start.
- He checks that the rider presenting himself at the start is indeed the rider mentioned on the starting-order sheet.
- The timekeeper counts down the minute or minutes prior to each start (in accordance with the distances between each starter) counting down the $30,20,10,5,4,3,2,1$ seconds and giving the starting "beep".
- The start must be from standing. The rider is held and released, without being pushed, by a "holder". This "holder" must be the same for all riders.
- If a rider presents himself late, he must cross the start line and record a stop time. His race time will be calculated as a function of the start time set for him. He will never take priority over a rider starting on time.
- He records any early starts.
- If the start time is recorded using an electronic strip, the distance between the contact point of the front tyre with the ground and the electronic strip must be 10 cm .
- The rider starts under the orders of the timekeeper, who performs a countdown. From the end of this countdown, the rider's time begins to be counted. The time of any rider presenting himself late at the start will be counted from the time normally set for his start.
- The start may be determined by the contact of the front tyre with an electronic timekeeping strip on the start line. If the rider starts slightly ahead of the 0 signal or within the 5 seconds before the end of the countdown, it is the trigger time that is taken into account. If the rider starts after this 5 -second period, or in the event of problems with electronic time recording, the rider's time is counted normally on the basis of the time set for his start.
- Timekeeper B (finish): at the finish, time recordings are made to 100th of a second in order to distinguish between any dead heats. However, times are published to the second in official communiqués on display boards and monitoring screens.
- In the World Championship and the Olympic Games, times are recorded and published to 100th of a second, using electronic timekeeping.
- In all cases, the timekeeper will, at the finish, make a dual recording of the times based on electronic timekeeping.
- When each rider finishes, the timekeeper will note down the body number and finish time on a finish-order sheet. He will transfer each rider's finish time to the individual form, to which the start time will already have been transferred, will calculate the race time and check it using any electronic time-keeping available to validate that time. He will then classify his forms, from best to worst time, calculate the average when each new best time is received and, as far as possible, with the assistance of the finish judge, re-establish the overall classification after the time trial in order to be able to provide the names of the new leaders as soon as the last rider finishes.
- The timekeeper will advise the names of riders arriving after the deadline to the panel of commissaires.
- The timekeeper at the finish is alone responsible for this classification.

### 2.4 Start order in a time trial in stage races

The start order of individual time trial stages is the reverse of the overall time classification for the previous day. However, the college of commissaires may modify this order in order to prevent two riders in the same team following one another.
During the prologue, or if the first stage is an individual time trial event, the teams' start order is set by the organizer in agreement with the college of commissaires, and each team will decide the start order of its riders.
The special regulations applying to each event in principle define the time gap separating each competitor, i.e. $1^{\prime}, 2^{\prime}$ or $3^{\prime}$, depending on the distance and the number of starters. This time difference may be increased for the first 10,15 or 20 in the overall classification.
When establishing the individual time trial start order, the timekeeper will check with the organizer regarding the desired finish time for the last competitor, taking into account award-ceremony problems or TV scheduling.
The timekeeper will then base his start order on the desired finish time for the last competitor.

Example: Event distance: $37.500 \mathrm{~km}, 78$ riders at the start leaving every $2^{\prime}$, except for the first 15 in the overall classification, who will leave every $3^{\prime}$.
Desired finished time for the last participant: 16 h 40.
Provisional race time of the last starter calculated as a function of the course profile, with an average envisaged at 50 km/h.
$37.500 \mathrm{~km} \div 50 \mathrm{~km} / \mathrm{h}=45^{\prime}$ of the race.
Start time of the last competitor: $16 \mathrm{~h} \mathrm{40-45}^{\prime}=15 \mathrm{~h} 55$.

## Calculation details:

15 riders with a separation of 3', i.e. 45'
62 riders with a separation of $2^{\prime}$, i.e. $\quad \frac{124^{\prime}}{169^{\prime}}$ or 2 h $49^{\prime}$.
The first competitor will thus start at $15 \mathrm{~h} 55-2 \mathrm{~h} 49=\mathbf{1 3} \mathbf{h} \mathbf{0 6}$.
In the above calculation, there are 15 competitors starting with a separation of $3^{\prime}$ from the rider preceding them. In fact, when it is stated that the last 15 leave every $3^{\prime}$, it should be understood that these 15 riders leave a good $3^{\prime}$ after the riders preceding them. Federal and UCI regulations are insufficiently precise, so some timekeepers tend to allow only $143^{\prime}$ separations, which means that the 15th in the overall classification leaves 2 ' after the 16 th in the overall classification.

EVENT: TOUR DE LORRAINE DATE: 30 May 2003

TIME TRIAL START ORDER
Riders start every 2 minutes
except for the last $\mathbf{1 5}$ starters, when the separation will be $\mathbf{3}$ minutes
First start at $\mathbf{1 3} \mathrm{h} \mathbf{0 6} \mathrm{min} \quad$ Last start at $\mathbf{1 5} \mathrm{h} \mathbf{5 5} \mathrm{min}$

| $\begin{aligned} & \circ \\ & \stackrel{\circ}{2} \\ & \text { 흠 } \end{aligned}$ | $\begin{aligned} & \circ \\ & \stackrel{0}{2} \\ & \stackrel{\rightharpoonup}{\circ} \\ & 0 \end{aligned}$ | Start time |  |  |

### 2.5 Team time trial events

The start order in team time trials is the reverse of the team overall classification. If there is no special, UCI-authorized regulation, the start order is set by a drawing of lots.

The classification of team time trial stages must count for the purposes of the individual time overall classification and team overall classification. The rules of the event will establish the time transfer method, including times for riders who are dropped.

Time recordings will take place on the 3rd, 4th or 5th rider, depending on the special regulations for the event. All riders finishing as a group will be awarded the same time, even if they finish ahead of the reference rider.
Riders dropped by the reference rider (gap of more than one second) will be awarded their actual time.
Each rider, if he finishes with the team, will have the time taken by the team entered in his individual overall classification. Certain special regulations covering events make provision for a maximum time ceiling for teams or riders arriving late relative to the best team's scratch time.
In terms of the team overall classification, the actual time of the reference rider (3rd, 4th or 5th) is taken into account.
The timekeeper will advise the names of the riders or teams arriving beyond the deadline to the panel of commissaires.

## Time penalties in an individual time trial

Time penalties are established in accordance with a UCI and federal scale, as a function of infringements committed: either a rider slipstreaming another rider or infringements on the part of a team manager drawing level with his rider, or other incidents.

NB: Time penalties are calculated in accordance with the scale as a function of the distance over which the infringement is committed and in accordance with the speed of the rider committing the infringement.
Example: a rider slipstreams a rider who has overtaken him over 800 m ; the speed of the overtaken rider is $41 \mathrm{~km} / \mathrm{h}$ and he will therefore be penalized by 16 ", in accordance with the following table.

## Time penalties for incidents occurring during the race

Time penalties imposed by the college of commissaires for incidents occurring in the course of the race are shown in the UCI penalty scale. These penalties are transferred to the individual overall classification or even to the team overall classification, at the discretion of the panel of commissaires.

### 2.6 Time-penalty table

Table of penalties, in seconds, applicable to time trial events:

| Dist. in metres | Speed in km/h |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 30 | 31 | 32 | 33 | 34 | 35 | 36 | 37 | 38 | 39 | 40 | 41 | 42 | 43 | 44 | 45 | 46 | 47 | 48 | 49 | 50 | 51 | 52 | 53 | 54 | 55 | 56 | 57 | 58 | 59 | 60 |
| 50 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 3 | 3 | 3 | 3 | 3 | 3 | 3 | 3 | 3 | 3 |
| 100 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 3 | 3 | 3 | 3 | 3 | 3 | 4 | 4 | 4 | 4 | 5 | 5 |
| 150 | 1 | 1 | 1 | 1 | 1 | 2 | 2 | 2 | 2 | 2 | 3 | 3 | 3 | 3 | 3 | 3 | 4 | 4 | 4 | 4 | 4 | 4 | 5 | 5 | 5 | 5 | 5 | 5 | 5 | 6 | 6 |
| 200 | 2 | 2 | 2 | 2 | 2 | 2 | 3 | 3 | 3 | 3 | 3 | 4 | 4 | 4 | 4 | 4 | 5 | 5 | 5 | 5 | 5 | 5 | 6 | 6 | 6 | 6 | 6 | 6 | 7 | 7 | 7 |
| 250 | 2 | 2 | 2 | 2 | 3 | 3 | 3 | 3 | 4 | 4 | 4 | 4 | 4 | 4 | 5 | 5 | 5 | 5 | 5 | 6 | 6 | 6 | 6 | 7 | 7 | 7 | 7 | 8 | 8 | 8 | 9 |
| 300 | 2 | 2 | 3 | 3 | 3 | 3 | 4 | 4 | 4 | 4 | 4 | 5 | 5 | 5 | 6 | 6 | 6 | 7 | 7 | 7 | 7 | 8 | 8 | 8 | 9 | 9 | 9 | 10 | 10 | 11 | 12 |
| 350 | 3 | 3 | 3 | 3 | 3 | 4 | 4 | 4 | 5 | 5 | 5 | 5 | 6 | 6 | 6 | 7 | 7 | 7 | 7 | 8 | 8 | 8 | 9 | 9 | 10 | 11 | 11 | 12 | 13 | 14 | 15 |
| 400 | 3 | 3 | 3 | 3 | 4 | 4 | 4 | 5 | 5 | 5 | 5 | 6 | 6 | 7 | 7 | 8 | 8 | 9 | 9 | 9 | 10 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | 17 | 18 | 19 |
| 450 | 4 | 4 | 4 | 4 | 5 | 5 | 5 | 6 | 6 | 6 | 6 | 7 | 7 | 8 | 8 | 9 | 10 | 11 | 11 | 12 | 12 | 13 | 14 | 15 | 16 | 17 | 18 | 19 | 20 | 22 | 23 |
| 500 | 4 | 4 | 4 | 5 | 5 | 5 | 6 | 6 | 7 | 7 | 7 | 8 | 8 | 9 | 9 | 10 | 11 | 12 | 12 | 13 | 14 | 15 | 16 | 17 | 18 | 20 | 21 | 22 | 24 | 26 | 28 |
| 550 | 5 | 5 | 5 | 6 | 6 | 6 | 7 | 7 | 8 | 8 | 8 | 9 | 10 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | 16 | 17 | 18 | 20 | 22 | 24 | 26 | 27 | 29 | 31 | 33 |
| 600 | 5 | 5 | 6 | 6 | 7 | 7 | 8 | 8 | 9 | 9 | 10 | 11 | 11 | 12 | 12 | 13 | 14 | 15 | 16 | 17 | 19 | 20 | 21 | 23 | 25 | 27 | 29 | 31 | 33 | 35 | 38 |
| 650 | 6 | 6 | 6 | 7 | 7 | 7 | 8 | 8 | 9 | 10 | 11 | 12 | 12 | 13 | 14 | 15 | 16 | 17 | 18 | 20 | 22 | 23 | 25 | 27 | 29 | 31 | 33 | 35 | 37 | 40 | 43 |
| 700 | 6 | 6 | 7 | 7 | 8 | 8 | 9 | 9 | 10 | 12 | 13 | 14 | 15 | 16 | 17 | 18 | 19 | 20 | 21 | 23 | 25 | 27 | 29 | 31 | 33 | 36 | 38 | 40 | 42 | 46 | 49 |
| 750 | 6 | 7 | 7 | 8 | 8 | 8 | 9 | 10 | 11 | 13 | 14 | 15 | 16 | 17 | 18 | 20 | 21 | 22 | 24 | 26 | 28 | 30 | 32 | 35 | 37 | 40 | 42 | 44 | 47 | 50 | 55 |
| 800 | 7 | 7 | 7 | 8 | 9 | 9 | 10 | 11 | 12 | 14 | 15 | 16 | 17 | 19 | 21 | 23 | 24 | 25 | 27 | 29 | 31 | 33 | 36 | 39 | 42 | 45 | 47 | 49 | 52 | 56 | 61 |
| 850 | 7 | 7 | 8 | 9 | 9 | 10 | 11 | 13 | 14 | 15 | 17 | 18 | 19 | 21 | 23 | 25 | 27 | 29 | 31 | 33 | 35 | 37 | 40 | 43 | 47 | 50 | 53 | 56 | 59 | 62 | 68 |
| 900 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 17 | 19 | 20 | 22 | 24 | 26 | 28 | 30 | 32 | 34 | 36 | 39 | 42 | 45 | 48 | 51 | 55 | 58 | 61 | 65 | 69 | 75 |
| 950 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 17 | 19 | 21 | 23 | 25 | 27 | 29 | 31 | 33 | 35 | 37 | 39 | 42 | 45 | 48 | 51 | 55 | 60 | 64 | 67 | 71 | 75 | 82 |
| 1000 | 8 | 9 | 11 | 12 | 13 | 14 | 15 | 17 | 19 | 21 | 23 | 25 | 27 | 29 | 31 | 34 | 36 | 38 | 40 | 43 | 46 | 49 | 52 | 56 | 60 | 64 | 68 | 72 | 77 | 82 | 90 |

### 2.7 Level crossings

## It is strictly prohibited to cross closed level crossings. A level crossing is regarded as closed as soon as the red light begins to flash.

UCI regulations contain provisions to be implemented in accordance with race situations in the case of the way ahead being blocked and regarding re-starting.
This article also applies to similar situations: movable bridges, obstacles on the roadway.

### 2.8 Prologue

Stage events may include a prologue, under the following conditions:

- The prologue must be less than 8 km long.
- The prologue must be contested as an individual time trial. In the event of more than 60 riders taking part, the gap between the riders at the start may not exceed 1 minute.
- The prologue must count towards the individual overall classification. It may, as appropriate, count towards the team overall classification (cf. the special regulations for the event).
- A rider who has an accident during the prologue and who is unable to finish the race may start the following day. He will be awarded the last time.
- It is forbidden to run or to arrange for the running of a second event on the same day as the prologue.
- The prologue counts as a race day.

### 2.9 Finishes

In the event of a fall, puncture or mechanical incident, duly recorded, after a rider has passed under the banner marking the start of the last three kilometres, the rider or riders involved is or are awarded the time of the rider or riders they were cycling with when the incident took place. His or their classification will be that of the crossing of the finish line.

If, in the wake of a fall after passing the kite marking the start of the last kilometre, a rider is unable to cross the finish line, he will be classified in last place for the stage and awarded the time of the rider or riders with whom he was cycling at the time the incident took place.

The above two articles do not apply to time trial stages or to summit finishes.

## Circuit finish:

Even if a stage ends at a circuit, times are always taken at the finish line.

## Track finish:

In the event of a track finish (velodrome or cinder track), times are recorded at the entry to the track, as the distance to be covered on the track is used only to distinguish between riders for the purposes of awarding stage places. On the track, the organizers may arrange for the distance between entry to the track and the finish line, increased by at most one complete lap, to be cycled.
Race commissaires reserve the right to stop any peloton at the entry to the stadium if the peloton arrives at the track when the latter is already congested on account of the preceding peloton or pelotons, allowing them to resume only when the track is clear again.
Consequently, places may become reversed in terms of the classification noted by the timekeeper and that recorded by the finish judge.
For the purposes of the overall classification, only the time recorded by the timekeeper at the entry to the velodrome will count, irrespective of the final place of the rider or riders in the stage classification.
In the event of a slippery track, the commissaires and the finish judge may base their calculations on the classification recorded by the timekeeper.

### 2.10 Formulae used for timekeeping calculations

$$
\begin{aligned}
& \mathrm{D}=\text { distance in kilometres } \\
& \mathrm{T}=\text { time in hours, minutes, seconds } \\
& \mathrm{M} \text { = average in kilometres/hour }
\end{aligned}
$$

* The following examples will enable you to get a better idea of the old method, making calculations to the second, and the method using the Casio calculator.

## Calculating an average

Distance: $147,600 \mathrm{~km}$ in the course of $3 \mathrm{~h} 16^{\prime} 47^{\prime \prime}$ :

$$
M=\frac{D}{T}
$$

## Method without Casio calculator

3h $=3 \times 3600^{\prime \prime}=10800^{\prime \prime}$
$16^{\prime}=16 \times 60^{\prime \prime}=960^{\prime \prime}$
$47^{\prime \prime}=$ i.e.: $^{11807^{\prime \prime}}$
$\frac{147,600 \mathrm{~km} \times 3600^{\prime \prime}}{11807^{\prime \prime}}=45.003811 \mathrm{~km} / \mathrm{h}$, i.e.: $45.003 \mathrm{~km} / \mathrm{h}$

## Method with Casio calculator

$147.600 \div 3 \square^{\circ \prime \prime} 16 \sigma^{\circ \prime \prime} 47 \square^{\circ \prime \prime}=45.003811 \mathrm{~km} / \mathrm{h}$

## Calculating a distance (same parameters)

$$
\mathrm{D}=\mathrm{T} \times \mathrm{M}
$$

## Method without Casio calculator

$$
\frac{11807}{3600} \times 45.003811=147.600 \mathrm{~km}
$$

## Method with Casio calculator

$3{ }^{\circ}$
47
45.003811
147.600 km

Calculating a time (same parameters)

$$
T=\frac{\mathbf{D}}{\mathbf{M}}
$$

## Method without Casio calculator

$$
T=\frac{147.600 \times 3600}{45.003811}=11807^{\prime \prime} \text { i.e. } 3 \text { h } 16^{\prime} 47^{\prime \prime}
$$

| 11807 | 60 |  |
| ---: | ---: | ---: |
| 5800 | 196 | 60 |
| $\mathbf{4 0 7}$ | $\mathbf{1 6}^{\prime}$ | $\mathbf{3 h}$ |
| $\mathbf{4 7 \prime}$ |  |  |

## Method with Casio calculator

$147.600 \div 45.003811 \square$ SHIFT ${ }^{\circ \times \prime \prime} 3^{\circ} 16^{\circ} 47$. i.e. 3 h 16' $47{ }^{\prime \prime}$
Nowadays, to calculate average, distance or time, a timekeeper will always use a specific calculator. However, it is important to be able to make these calculations without using a specific calculator.

## Calculating a distance travelled in a given time

## Calculating the distance travelled in the course of 1 hour

- 10.150-km circuit
- 3 laps of this circuit completed in $51^{\prime} 17^{\prime \prime}$
- At the end of the 4th lap, the stopwatch indicated: 1 h 07' 29"

Example: At the end of the 3rd lap ( $51^{\prime} 17^{\prime \prime}$ ), in order to obtain the race time, the following thus remains: $1 \mathrm{~h}=60^{\prime}-51^{\prime} 17^{\prime \prime}=8^{\prime} 43^{\prime \prime}$ Then calculate the time taken to travel the 4th lap:
Time over the 3rd lap:
Time over the 3rd lap:
Time of the 4th lap:
0 h 51' 17"
0 h 16' $\mathbf{1 2}^{\prime \prime}$
To calculate the distance covered in the course of $8^{\prime} 43^{\prime \prime}$ (time remaining to be travelled in order to obtain the time at the end of the 3rd lap), it will be necessary to divide the distance of the 4th lap ( 10.150 km ) by the time of the 4th lap ( $16^{\prime} 12^{\prime \prime}$ ), and to multiply it by the time needed to obtain the time ( $8^{\prime} 43^{\prime \prime}$ ).

$$
\frac{10.150 \times 8^{\prime} 43^{\prime \prime}}{16^{\prime} 12^{\prime \prime}}=5.4613683 \mathrm{~km}
$$

This distance thus being added to the $310.150-\mathrm{km}$ laps travelled after $51^{\prime} 17^{\prime \prime}$.
The distance covered in the course of $51^{\prime} 17^{\prime \prime}: 30.450$
Supplementary distance over $8^{\prime} 43^{\prime \prime}$ :
Distance covered in the course of 1 hour: $\quad \overline{35.911} \mathbf{~ k m}$

### 2.11 Calculating a time for a given distance

## Calculating time taken to cover 50 km

In the course of $1 \mathrm{~h} 18^{\prime} 07^{\prime \prime}$, he has covered 5 laps of a $9.400-\mathrm{km}$ circuit.
At the end of the 6th lap, the stopwatch indicated 1 h $33^{\prime} 23^{\prime \prime}$
Example: At the end of the 5th lap, the following distance was still to be covered: $50.000-47.000=\mathbf{3 . 0 0 0} \mathbf{~ k m}$
Time taken to cover the 6th lap:
Time to cover the 6th lap:
Time to cover the 5th lap:
Time of the 6th lap:

1 h $33^{\prime} 23^{\prime \prime}$

- 1 h $18^{\prime} 07^{\prime \prime}$

0 h 15' $16^{\prime \prime}$

The time taken to cover the 6th $9.400-\mathrm{km}$ lap is thus $15^{\prime} 16^{\prime \prime}$.
To calculate the distance remaining to be covered after the 5th lap in order to obtain the $50.000 \mathrm{~km},(\mathbf{3 . 0 0 0} \mathbf{~ k m})$, the following calculation will be made:
$\frac{\text { Time of the 6th lap } x \text { distance remaining to be covered for the } 50 \mathrm{~km}}{\text { Lap distance }}$ i.e.: $\frac{15^{\prime} 16^{\prime \prime} \times 3.000}{9.400}=4^{\prime} 52^{\prime \prime} 34 / 100$, rounded to $4^{\prime \prime} 52^{\prime \prime}$

To cover the 50.000 km , riders will thus have taken:
$1 \mathrm{~h} \mathrm{18} \mathrm{\prime} 07^{\prime \prime}$ (time recorded at the end of 47.000 km )
$+0 \mathrm{~h} 04^{\prime} 52^{\prime \prime} \quad$ (time to cover the additional 3.000 km )
1 h 22' 59" (time for the 50.000 km )

### 2.12 Calculating a time and a distance as a function of specific data (in the event of a rider involved in an accident)

A peloton is travelling at a constant speed of 42.300 km per hour.
Rider A is involved in an accident and stopped for $1^{\prime} 47{ }^{\prime \prime}$.
This same rider A, after having received breakdown assistance, travels at a constant speed of $44,200 \mathrm{~km} / \mathrm{h}$.
How long will he need to rejoin the peloton, and after what pursuit distance?
Example: Speed gap between rider A and the peloton:

$$
\begin{array}{lr}
\text { Rider A speed: } & 44.200 \\
\text { Peloton speed: } & 42.300 \\
\text { Speed gap: } & 1.900
\end{array}
$$

Rider A thus covers, each hour, 1.900 km more than the peloton.
While rider A was stopped, i.e. $1^{\prime} 47^{\prime \prime}$, the peloton, at its average speed of $42.300 \mathrm{~km} / \mathrm{h}$, covered:

## $42.300 \times 1^{\prime} 47^{\prime \prime}=1.25725 \mathrm{~km}$

- The time needed by rider A to rejoin the peloton will thus be 1.25725 km (A's delay); divide by 1.900 km (speed gap between A and the peloton), i.e. $0^{\circ} 39^{\circ} 42.1$. $1.25725 \mathrm{~km} \div 1.900 \mathrm{~km}=$ SHIFT $0^{\circ \times 1}=0^{\circ} 39^{\circ} 42.1$
- The distance needed by rider A to rejoin the peloton will thus be: $44.200 \mathrm{~km} / \mathrm{h}$ (average of A) multiplied by $39^{\prime} 42.1$ (time taken by A to rejoin the peloton), i.e.:
44.200 km/h x $39^{\prime} 42.1=29.246894$ km

For the purposes of monitoring, this distance may be checked as follows:
Distance covered by the peloton since A's stop:
$42.300 \mathrm{~km} / \mathrm{h} x\left(1^{\prime} 47^{\prime \prime}+39^{\prime} 42.1\right.$, i.e. $\left.41^{\prime} 29.1\right)=29.246925 \mathrm{~km}$
The 31 mm difference recorded is the result of the calculator rounding off numbers.

### 2.13 Calculating a race time

For the purposes of TV requirements, the «MENTON - LE CANET» stage has to arrive at 15 h 30 min . Using the following stage profile:

- he climb parts are covered at $22 \mathrm{~km} / \mathrm{h}$ on average,
- the descent parts are covered at $53 \mathrm{~km} / \mathrm{h}$ on average,
- the flat part is covered at $40 \mathrm{~km} / \mathrm{h}$ on average.

Once again, the formula to be used is:
Distance $\div$ Average $=$ Time
NB: Each intermediate passage time will be rounded to the nearest minute.

| km | Location | Section distance | Average inquest | Gross time | Rounded time | Provisional time |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0.0 | Menton | 0.0 |  |  |  | 12 h 21 |
| 8.8 | Sommet de la Turbie | 8.8 | 22.0 | $24^{\prime} 00^{\prime \prime}$ | $24^{\prime}$ | 12 h 45 |
| 21.0 | Bas de la Turbie | 12.2 | 53.0 | $13^{\prime} 48^{\prime \prime}$ | $14^{\prime}$ | $12 \mathrm{~h} 59^{\prime}$ |
| 32.5 | Sommet d'Aspremont | 11.5 | 22.0 | 31' $21^{\prime \prime}$ | $31^{\prime}$ | $13 \mathrm{~h} 30^{\prime}$ |
| 44.0 | Bas d'Aspremont | 11.5 | 53.0 | 13' $01{ }^{\prime \prime}$ | $13^{\prime}$ | $13 \mathrm{~h} 43^{\prime}$ |
| 60.5 | Sommet de Vence | 16.5 | 22.0 | 45' $00^{\prime \prime}$ | $45^{\prime}$ | $14 \mathrm{~h} 28^{\prime}$ |
| 77.5 | Bas de Vence | 17.0 | 53.0 | $19^{\prime} 14^{\prime \prime}$ | 19' | 14 h 47 |
| 80.0 | Sommet de Chateauneuf | 2.5 | 22.0 | $6^{\prime} 49^{\prime \prime}$ | $7{ }^{\prime}$ | $14 \mathrm{~h} 54^{\prime}$ |
| 101.0 | Bas de Chateauneuf | 21.0 | 53.0 | $23^{\prime} 46^{\prime \prime}$ | $24^{\prime}$ | $15 \mathrm{~h} 18^{\prime}$ |
| 109.0 | Le Canet | 8.0 | 40.0 | $12^{\prime} 00^{\prime \prime}$ | 12' | 15 h 30 |
|  |  | 109 |  |  | $\begin{array}{r} 189^{\prime} \\ 3 \mathrm{~h} 09^{\prime} \end{array}$ |  |

## 3. Track

Presentation of a standard 250-m piste layout (Hyères-Bordeaux):

(1) Referee judge podium
(2) Finish line
(3) Finish judge's podium
(4) Starter's podium
(5) 200 m line
(6) Back straight
(7) Blue band
(8) Measuring line
(9) Sprinter's line (red)
(10) Stayer's line (blue)

### 3.1 Recap of international regulations

## Regulation records

Road records are not recognized. Only track performances are recognized, without trainers.

## UCI-recognized records

| ALL CATEGORIES | Flying start: $200 \mathrm{~m}-500 \mathrm{~m}$ |
| :--- | :--- |
| MEN | Standing start: $1 \mathrm{~km}-4 \mathrm{~km}-4 \mathrm{~km}$ per team - hour - best performance in the hour. |
| JUNIORS MEN | Standing start: $1 \mathrm{~km}-3 \mathrm{~km}-4 \mathrm{~km}$ per team |
| WOMEN | Standing start: $500 \mathrm{~m}-3 \mathrm{~km}$ - heure - best performance in the hour |
| JUNIORS WOMEN | Standing start: $500 \mathrm{~m}-2 \mathrm{~km}$ |

## Example of records recognized by the FFC

| MEN | Flying start: $\quad 200 \mathrm{~m}-500 \mathrm{~m}-1 \mathrm{~km}$ |
| :---: | :---: |
|  | Standing start: $500 \mathrm{~m}-1 \mathrm{~km}-4 \mathrm{~km}-$ Hour $^{(1)}$ and best performance in the hour 4 km per team. |
| WOMEN | Flying start: $\quad 200 \mathrm{~m}-500 \mathrm{~m}$ |
|  | Standing start: $500 \mathrm{~m}-1 \mathrm{~km}-3 \mathrm{~km}-\mathrm{Hour}{ }^{(1)}$ |
| JUNIORS BOYS | Flying start: $\quad 200 \mathrm{~m}-500 \mathrm{~m}-1 \mathrm{~km}$ |
|  | Standing start: $500 \mathrm{~m}-1 \mathrm{~km}-2 \mathrm{~km}$ |
| JUNIORS GIRLS | Flying start: $200 \mathrm{~m}-500 \mathrm{~m}$ |
|  | Standing start: $500 \mathrm{~m}-1 \mathrm{~km}-2 \mathrm{~km}$ |
| CADETS | Flying start: 200 m |
|  | Standing start: 2 km |
| FEMALE CADETS | Flying start: 200 m |

### 3.2 Recording times in various track events

## Individual sprint

## 200 m flying start

- Qualifying events are organized over 200 m , time trial, flying start.
- Electronic timekeeping is to 1000th of a second using contact strips, matched by manual timekeeping to 100th of a second.
- The time recorded for each competitor will enable commissaires to establish the composition of the various series.
- In the event of a dead heat, riders are distinguished by means of a drawing of lots.
- The timekeeper will record the time for each competitor in order to forward these times to the panel secretary responsible for establishing series.
- The timekeeper will supervise the lap counter and the bell.

## Sprint tournament

- As above, the timekeeper records times over the last 200 m .

## Team sprint

- Events are contested by teams each composed of 3 riders (men) over 3 track laps.
- Each rider must complete one lap and then move away on crossing the finish line.
- The rider in the inside lane is held by the starting block, or by a principal commissaire, and must lead until the first changeover, when he is replaced by the next rider for the second lap, the third rider finishing the event. The time will be recorded at the front wheel of the third rider (changeovers taking place within an area within fifteen metres in front of and behind the finish line).
- The aim is to ascertain the 4 or 8 best teams to participate in the first lap or directly in the finals.

## Competition organization

It is organized in two or three phases, in accordance with UCI or NF regulations:

- qualifying heats designating the best 4 or 8 teams on the basis of times achieved,
- final heats:
- 1st lap: the best 8 times will race against one another: 1st against 8th, 2nd against 7th, etc., then finals: the four victorious teams will race against one another as below
- or direct finals: teams achieving the two best times will contest the final for first and second place, and the two others will contest the final for third and fourth places.
Teams beaten in the first round of the competition will be classified in 5th to 8th place, on the basis of the times achieved at that stage of the competition. In the case of direct finals, it will be the times of the heats that will also establish the 5th to 8th place classification.

NB: In the event of a dead heat in terms of time at the finish, it is the best time achieved in the last lap that will distinguish between the teams, hence the obligation to record times "lap-by-lap".

## Individual sprint

Times are recorded every half-lap to $1 / 1000$ of a second, the electronic stop watch or the starting block or blocks being triggered by the starter's pistol, matched by manual timekeeping. Intermediate time recordings are important in the event of an acknowledged accident (cf. the explanations given below).

## Qualifying heats

Start using starting blocks, otherwise use two principal commissaires, 2 riders on the track, start on back straights, strongest against strongest, weakest against weakest, the best times not being pitted against one another, recording of times to 1000th of a second.
After the qualifying time classification, the UCI or NF regulations will establish the organization for the remainder of the tournament, for the final phases.

## Finals

During finals, if a rider catches up another rider, the race is terminated.
A rider is deemed to have been caught up when his opponent's bicycle crankset is alongside his own crankset.
Riders beaten in the qualifying heats will be classified on the basis of the time they have achieved in those heats from 5th place.

## Evolution of the tournament

In the first half-lap, in the event of a recognised or un-recognised mishup, irrespective of the level of the event, the race is stopped and immediately re-run.

After the first half-lap, during monitoring distinguish properly between two important aspects:

1. Qualifying phases established on the basis of time, therefore no race stoppage after the first half-lap in the case of a recognised or un-recognised mishup. Only the rider who has suffered a recognised or un-recognised mishup will make another attempt at the end of the qualifying heats or of the first round. The other rider will continue.
NB: In qualifying heats, any rider who is caught up continues, in order to have his time recorded, and must not slipstream the rider who has caught him up or overtake him, subject to disqualification.
2. Finals: in the event of an accident, the following provisions will be applied:

- first half-lap restart in all cases
- after the first-lap and up to the last km or 500 m

Riders restart at the half-lap point of their last passage with leading rider $\mathbf{A}$ on the line and rider B with the delay in terms of distance calculated as follows:

As the sprint is timed for each competitor, half-lap by half-lap, the last time recording made before the incident is available.
If the last passage at 2500 m gave:
rider $\mathbf{A}$ in the lead $=\mathbf{3}^{\prime} \mathbf{\prime \prime} 1^{\prime \prime} 98$ and rider $\mathbf{B}$ delayed $=\mathbf{3 '}^{\prime} 13^{\prime \prime} 76$
rider B thus has a delay of: $\mathbf{3}^{\prime} 13^{\prime \prime \prime} 76-3^{\prime} 11^{\prime \prime} 98=1{ }^{\prime \prime} 78$
and he will have to restart with a delay corresponding to the distance he covered during that period.
Rider B having covered 2500 m in $3^{\prime} 13^{\prime \prime} 76$, his delayed time being $1^{\prime \prime} 78$, this represents a distance of:

$$
\frac{2500 \times 1 " 78}{3^{\prime} 13^{\prime \prime} 76}=\frac{2500 \times 1,78}{193,76}=22,96 \text { metres }
$$

the restart will thus be given at the following positions:

- rider A, at point 1
- rider B, 22,96 m before point 2

The riders will thus restart at the positions acquired at the time of: $\mathbf{3}^{\prime \prime} 11^{\prime \prime} 98$
It will suffice to add to this time that achieved by each of the 2 riders in the second part of the sprint in order to obtain the total time for each competitor.

Time recorded by rider A for his second part of the race: 1 ' 56 " $79 / 100$
Time recorded by rider B for his second part of the race: $1^{\prime} 58^{\prime \prime} 42 / 100$
Total time for A: before the incident: $3^{\prime} 11^{\prime \prime} 98 / 100$
after the incident: 1 ' 56 " 79/100
Total: $\quad 5^{\prime} 08^{\prime \prime} 77 / 100$
Total time for B: before the incident: $3^{\prime} 11^{\prime \prime} 98 / 100$
after the incident: $\quad 1^{\prime} 58^{\prime \prime} 42 / 100$
Total: $\quad 5^{\prime} 10^{\prime \prime} 40 / 100$

## COMMENT

Do not calculate the gap on the basis of the average of the fastest rider because we would no longer obtain the actual gap when rider $\mathbf{A}$ passes at $\mathbf{1}$ but the lead of rider $\mathbf{A}$ when rider $\mathbf{B}$ passes at $\mathbf{2}$, which is not timed and would no longer give the true position at the time of $3^{\prime} 11^{\prime \prime} 98$.

## Last kilometre ( 500 m )

If one of the riders is involved in an accident, the result is established at that point, the leading rider being declared the winner. The average achieved in the last half-lap enables the time to be attributed to him to be calculated.
NB: Only one restart is ever authorized after an accident, authorization is never given for a single restart.

### 3.3 Team sprint

- Two teams of 4 riders race over a distance of 4 km .
- Teams start at two opposite points on the track (back straights).
- The rider in the inside lane is held by the starting block or by a principal commissaire.
- The winning team is the team recording the best time or catching up the other team.
- The team's time is recorded at the front wheel of the 3rd rider in each team.
- Intermediate times are recorded at each half-lap, on the front wheel of the 1 st rider.

## Heats

- Tracks under 400 m , each team will race on its own, time trial.
- Tracks 400 m and over, commissaires will pit against one another 2 teams presumed to be of the same standing, although the 2 teams that are presumed to be the best teams will not race against one another.
- Any team that is caught up finishes so its time can be recorded. A team is caught up when an opposing team (at least 3 riders cycling together) has caught up to within a distance equal to one metre.
- After the time classification of the heats, the UCI or NF regulations will establish the organization of the tournament for the final phases.

## Finals

- During finals, if one team catches up another team, the race is terminated.
- Teams beaten in the heats will be classified on the basis of the time they have achieved in those heats from 5th place and taking into account UCI regulations regarding teams suffering incidents and accident of various types.

### 3.4 Kilometre, 500 m, standing start

- These are timed time trial events, with a standing start. Competitors are held by starting blocks or by a principal commissaire.
- The start order is established by the drawing of lots. During championships or official competitions, the first 10 classified from the previous year will start last in the reverse order of the classification.
- Time recording: when the starter's countdown has finished, the start is signalled by means of the pistol, which opens the starting block and triggers the electronic stopwatch. Finish times are recorded by the stopwatch being triggered as the front wheel passes over the contact strip.
- All competitors must make their attempt during one and the same meeting. If, for any reason (e.g. rain) these events cannot be completed, the times recorded are not taken into account and all participants will have to race again at the next meeting.
- NB: In the event of a dead heat, riders are classified as dead heats. In terms of the podium, they will each be awarded an identical medal.

### 3.5 Points race

- This race is a speciality in which the classification is established on the basis of the cumulative points won by the riders during sprints and laps they have won. The notion of time is optional.
- The start is a flying start after a neutralized grouping lap. The timekeeper is responsible for monitoring the lap counter and the bell. It is set to the leading riders in terms of distance, the bell having to be sounded only for riders who will score points, and not beyond, action to be carried out when the riders enter the straight.
- Timekeepers will record the race time in order to be able to forward the average to the announcer, who will inform the audience.

### 3.6 Madison

- A Madison race is a race contested over intermediate team sprints by 2 riders.
- The classification is established in terms of distance and of points won by the riders.
- The start is a standing start with one rider from each team, for the first part of the relay.
- The event generally takes place over a given distance, rarely over a given time.
- In distance events, the timekeeper's role is identical to that for a points race.
- In events run over a given time, the timekeeper will sound the finish bell when the time remaining is less than the time for one lap of the track.
- The classification will be established at the finish line, one lap after the bell.

## The notion of time is optional

### 3.7 Scratch

- Individual race contested over a statutory distance in accordance with the competitors' category.
- The start is a flying start, after a neutralized grouping lap.
- The classification is established during the final sprint, riders being classified as a function of the laps won or lost and the order in which they cross the finish line.
- The timekeeper will supervise the lap counter and the finish bell.

## The notion of time is optional

### 3.8 Elimination

- Individual race in which the last rider in each intermediate sprint is eliminated on the basis of the position of the rear wheel at the finish line.
- During the final sprint (2 riders), the classification will be established on the basis of the front wheel when the finish line is crossed.

## The notion of time is optional

### 3.9 Keirin

- Riders race against one another in a sprint after having completed a certain number of laps (at most, close to 2000 m ) behind a coach on a moped who leaves the track 600 to 700 m before the finish.
- Sprints are judged on the basis of the rules for a sprint and the timekeeper will record the time of the last 200 m in each heat.
- He will also monitor the lap counter and the bell.
- The timekeeper will calculate the average speed of the coach, lap by lap, in order to check his progress and the terminal speed of his last lap before he moves off in order to allow the racers to finish the sprint. This enables the judge referee to indicate to the coach whether he is complying with the speed required by the regulations.

### 3.10 Records

- Records must be timed electronically to 1000th of a second, lap by lap.
- Electronic timekeeping for record attempts of one hour is matched by manual timekeeping carried out by federal timekeepers.
- The timekeeper must stand on the passage line of the candidate attempting the record, on the track, either inside or outside same.
- A passage time may never be made on the basis of guess work at a point on the track where the timekeeper is not standing.
- The original timekeeping sheets, drawn up lap by lap, must all be signed by the timekeepers, as must the tape recording the times of the electronic timer.
- If the length of the track does not correspond to a sub-multiple of a kilometre, it is, for certain distances, necessary to complete a fraction of a lap in addition to complete laps.
- This additional distance must be covered at the start in order, after that, to have a number of complete laps to be covered. The timekeeper must stand at the start line in order, then, to take up position at the finish line where each passage of the candidate attempting the record is recorded.
- To that end, the additional distances to be covered in order to achieve a set number of kilometres must be marked on the measuring line.
- Timekeepers and commissaires must check these markings before attempts.

The establishment of a record over a distance in a given time, may be the subject of a calculation in order to determine the exact performance as mentioned below:
In the case of calculating distances travelled in a given time, for example the record for the hour, the candidate attempting the record must, when the time has expired, finish the additional lap. The time for the last lap makes it possible to determine, by means of the calculation, the average distance travelled.

$$
\begin{aligned}
& D=(\mathrm{LPi} \times T C)+\mathrm{DiC} \\
& \mathrm{DiC}=\frac{\mathrm{LPi} \times \mathrm{TRC}}{\mathrm{TTC}}
\end{aligned}
$$

In which:
D: distance travelled in the hour
DiC: additional distance
LPi: track length
TTC: additional-lap time
TRC: time still to run at the start of the last lap
TC: number of complete laps before the last lap
The distance travelled is rounded down to the nearest metre. The record cannot be beaten by less than one metre. As a function of the average time per lap of the track by the candidate attempting the record, the timekeeper must be ready to trigger the bell announcing the last lap when the time still to run is less than the average time achieved for a lap of the track.
The end of the attempt is announced by two pistol shots when the rider crosses the finish line after the time envisaged has expired.
If, between the expiry of the time indicating the end of the attempt and the end of the last lap, an unforeseen incident, puncture, fall, etc. does not enable the complete lap to be finished, it is the time for the previous lap that would be used to calculate the additional distance travelled.
For any record attempt, the blue-band part must be rendered unusable by means of the fitting of beading 0.50 m long and 0.08 m thick placed at the bends, every 5 metres.
A record broken on the same day (by the same rider) is not ratified.
A record cannot be broken by a distance of under one metre.

## Starting blocks

Starting blocks and electronic timing are mandatory in all time recording attempts with a standing start activated by the starter's pistol.

### 3.11 Example of the hour record established by Tony Rominger

On 5 November 1994, at the Bordeaux Velodrome ( 250 m ), Tony ROMINGER broke the hour record. He completed 221 full laps in 59' 57" 434/1000. The 222nd lap (additional lap) was completed in 15" 554/1000.

1) Calculate this record, writing down your operations.
2) In the knowledge that he used a gear ratio of 9.50 m , what was his pedalling rate?

## Résultat

1) $D=L P i x T C+D i C$

Distance travelled in 59' $577^{\prime \prime} 434 / 1000=250 \mathrm{~m} \times 221$ laps $=55250 \mathrm{~m}$
Time still to be covered at the end of the 221st lap to make the hour: $1 \mathrm{~h}=60^{\prime}-59^{\prime} 57^{\prime \prime} 434 / 1000=2^{\prime \prime} 566 / 1000$
Distance travelled in the 222nd lap in 2" 566/1000:
Track length: $\quad \frac{250 \times 2.566}{15.554}=41.24341 \mathrm{~m}$
Time for the 222nd lap 15.554
Distance travelled in the hour:

| Distance covered in: | 59' 57' 434/1000 | 55250 '00000 m |
| :---: | :---: | :---: |
| Distance covered in: | 2" 566/1000 | 41.24341 m |
|  | 60' 00" 000/1000 | 55291.24341 m |
| Record ratified as | 55.291 km |  |

2) Calculation: $55291 \mathrm{~m} \div 9.50 \mathrm{~m}=5820.10$ (i.e. number of revolutions of the crankset)
$5820 \mathrm{tp} \div 60^{\prime}=97$ laps per minute (pedalling frequency)

## 4. Cyclo-cross

Cyclo-cross events are run at circuits in accordance with categories of age and class and over a given time. Notions of time per lap are therefore important, and regulations may change. We would suggest that at the start of each season you note down the event durations for each category.
A) In events, the timekeeper is designated and will be responsible for calculating the number of laps to be completed for a given time for the event depending on the category.
The timekeeper will trigger the stopwatch when the riders are released and will record the time taken for the part before entry to the circuit (if appropriate) and will then calculate the actual time of the first lap of the circuit, with the order of passage of the first 10 competitors and their distances, and he will proceed in the same way for each lap. He will forward these orders of passage and distances to the announcer so that the latter can inform the audience.
At the end of the 2nd lap: he will calculate the average time taken for the first 2 laps so as immediately, when the leading man passes, to post up the number of laps remaining after this 2nd lap, in order to be very rapid, with the minimum of error. The correspondence table (No of laps to time) will make his calculations easier.
NB: Remember to incorporate the part before the entry to the circuit.
Example: Cyclo-cross Elites - Time 1 hour:
Part before the entry to the circuit - time taken: 18 seconds
Time to the end of the 1 st lap: $4^{\prime} 28^{\prime \prime}$. Time to the end of the 2nd lap: $8^{\prime \prime} 42^{\prime \prime}$

$$
\begin{aligned}
& 8^{\prime} 42^{\prime \prime \prime} \\
& -\quad 18^{\prime \prime} \\
& \hline 8^{\prime} 24^{\prime \prime} \\
& 8^{\prime} 24^{\prime \prime}: 2=4^{\prime} 12^{\prime \prime} \\
& \text { i.e. } 4^{\prime} 12^{\prime \prime} \text { per lap x } 14 \text { laps }=\begin{array}{l}
58^{\prime} 48^{\prime \prime} \\
+\frac{18^{\prime \prime}}{59^{\prime} 06^{\prime \prime}}
\end{array}
\end{aligned}
$$

On the above bases, the theoretical race time would therefore be $59^{\prime} 06^{\prime \prime}$ (for 1 hour), competitors in principle reducing their speed with the number of laps. The leading man with 14 laps will be very close to one hour.
NB: the table with $4^{\prime} 15^{\prime \prime}$ per lap gives 14 laps for a total of $59^{\prime} 30^{\prime \prime}+$ the entry part of $18^{\prime \prime}$.
B) In events forming part of the regional calendar, there is in principle no designated timekeeper and this function is carried out by the finish judge.
Table giving the number of laps to be completed based on times in laps completed

|  |  | $45 / 100$ |  |

## Track

1) Calculating an average of the last 200 metres (rounded to the centimetre)

200 m in 10" 56/100
200 m in 11" $59 / 100=$
200 m in 11" 98/100=
200 m in 12" 472/1000 =
200 m in $13^{\prime \prime} 783 / 1000=$

## 2) Twenty-four hour record

On 13 August 1999, Alexandre VERGUET established a new "Record de Lorraine" over 24 hours at the Commercy Velodrome - track of 285.71 metres.

His passing times were as follows:
1783 laps in 23 h $59^{\prime} 55^{\prime \prime} 08^{\text {th }}$
1784 laps in 24 h $00^{\prime} 21^{\prime \prime} 26^{\text {th }}$
On the basis of those data, precisely determine the figures for the new record.
(Provide details of your calculations):

## Results

1) $68,18181 \mathrm{~km} / \mathrm{h}$
$62,12251 \mathrm{~km} / \mathrm{h}$
60,10016 km/h
57,72931 km/h
$52,23826 \mathrm{~km} / \mathrm{h}$
2) 3) Distance covered in $23 \mathrm{~h} 59^{\prime} 55^{\prime \prime} 08^{\text {th }}$ :
$285,71 \mathrm{~m} \times 1783$ tours $=509420,93 \mathrm{~m}$
$=509,42093 \mathrm{~km}$
1) Time still to run to the end of the 1783 laps to reach 24 hours:

24 h $00^{\prime} 00^{\prime \prime} 00 / 100$

- 23 h 59 ' 55 " 08/100

04" 92/100
3) Time of the 1784th lap:

24 h $00^{\prime} 21^{\prime \prime} 26 / 100$

- 23 h 59 ' 55 " 08/100
$00^{\prime} 26^{\prime \prime} 18 / 100$

4) Distance covered in the 1784th lap in 4' $92 / 100$ :
$\frac{285,71 \times 4^{\prime \prime} 92 / 100}{26^{\prime \prime} 18 / 100}=53,6934 \mathrm{~m}$
5) Distance covered in 24 hours:

509420,93 m
$53,6934 \mathrm{~m}$
$+\quad$
509474,6234 m rounded to 509,474 km

## Calculation of distances and times

Circuit event - circuit length 17.484 km

Complete the table on the basis of the following:
A) indicate the number of kilometres lap by lap:
B) indicate the time for each lap on the basis of the total time:
C) calculate the distance covered in 2, 4 and 6 hours:
D) calculate the time for 50,100 and 200 km :
E) calculate the average lap by lap:
F) calculate the overall average:

### 5.2 Tour de Lorraine

## Overall classifications for the tour de lorraine

Tour de Lorraine - stage event:
1st stage, road: 183.600 km , deadline $10 \%$
2nd stage, road: 138.900 km , deadline $10 \%$
3rd stage, individual time trial: 27.350 km , deadline $25 \%$
Bonuses to finishers:

$$
1^{\text {th }} 10^{\prime \prime}-2^{\text {nd }} 6^{\prime \prime}-3^{\text {rd }} 4^{\prime \prime}
$$

Intermediate sprint bonuses:

$$
1^{\text {th }} 3^{\prime \prime}-2^{\text {nd }} 2^{\prime \prime}-3^{e} 1^{\prime \prime}
$$

- 1st stage, 1st sprint: 121-85-7 / 2nd sprint: 121-85-92
- 2nd stage 1st sprint: 85-105-121 / 2nd sprint: 124-3-85

Comment: rider 72 falls at 800 m from the finish line, while he was in the peloton with a time of $3 \mathrm{~h} 11^{\prime} 57^{\prime \prime}$.
3 teams involved, composed of 8 riders.
2 riders not registered for stage 1: body numbers 73 and 108.

At the end of the third stage, using the timekeeping judge's finish sheets and the record of time trial finishes, draw up the following:

1) the individual forms for the time trial;
2) the classification for this time trial;
3) the individual overall classifications following each time and points stage;
4) the time and points team classifications for the 1st, 2nd and 3rd stages;
5) the team overall classifications for each time and points stage;
6) the final individual overall classification;
7) the average for the event;
8) the average for the 1st-placed in the overall classification;
